

# MAPPING

The new WayPhone Manager Graphical User Interface will include an optional Map facility to display a graphical map covering the areas where phones are installed. The map is able to be panned and zoomed in or out to show appropriate level of detail. Emergency telephones are represented via icons on the map. The emergency telephone map icons will change colour and flash depending on the current call and test status of each phone. Using pop-up menus accessed from the map icons many emergency telephone call and maintenance functions are made quickly and conveniently available.
