WAYPHONE
TESTER

The WayPhone Tester is an easy to use and inexpensive solution for maintaining a network of WayPhones providing automatic and manual testing facilities plus managing WayPhone configuration records. Facilities for phone diagnostics, event logging and database configuration changes are provided under mouse/ keyboard control in a user-friendly Windows environment.

FEATURES

- Automatic and manual WayPhone testing with audible alarm

- Database logging of alarm/system events with viewing, filtering and printing facilities

- Facilities to modify WayPhone configuration records
- On-screen control to customize system settings

ALARM MANAGEMENT

- On the detection of a WayPhone fault condition, visual and audible alarms will be generated.

- All faults are stored in the database and there is an on-screen facility to silence the audible alarm.

- Alarms are automatically cleared when the system detects a fault condition has been removed.
