

## iTouch Touchless Pedestrian Time Extender

### One-Tap Safer Pedestrian Crossing for Disabled and Senior Citizens

Introducing iTouch+ Pedestrian Time Extender the latest in One-Tap technology.

Disabled and Senior Pedestrians can now activate an extended 'time to cross' at the signalised intersection with just a tap of their concession card.

## DESCRIPTION

Seniors and those with a disability often require modification to the time limits allowed at pedestrian crossings and busy intersections, the conventional push button system may not give adequate time for safe crossing, especially for those who are less reactive and slower in crossing, which may give way to anxiety and panic.

The **iTouch+**, allows senior and disability cardholders to tap their concession card onto the sensor, mounted above the conventional push button controller. The tap region is clearly indicated and is easily accessible.

One-tap of the concession card extends the green-man time from anywhere between 3 - 13 seconds depending on the size and location of the crossing.

This system has been tried and tested for many years and has been a great benefit to elderly and disabled pedestrians users.

## KEY BENEFITS

### Safer Crossing

Allowing immobile pedestrians extended pedestrian crossing times at traffic intersections, reduces panic, frustration and fear of traffic, which can be an altogether unpleasant experience and may also prevent a person from going out in public for fear of accidents.

### Public Hygiene

People with impairment, elderly or disabled, need to be protected by improved hygiene measures. The risk of infection is greatly increased by human to surface contact. With the introduction of the one-tap for the elderly and disabled, the spread of infection is substantially reduced. **iTouch+** is a hygienic alternative to standard pedestrian push buttons, which protects the public from potentially contaminating their hands and can prevent virus spread.

### Installation

**iTouch+** is designed to fit snugly above an existing conventional push button control system or the new iTouch Touchless system. The curve of the **iTouch+** mirrors the shape of the conventional push button system.

## FEATURES

- One-Tap Concession Card Reader
- Integrated Pedestrian Countdown (IPC)
- Information Panel
- LED Indicator
- Vibrating Audible Feature
- Extendible Green Man Time (between 3 - 13 seconds)
- Site Specific Extendible Green Man Time
- False Activation Card Prevention
- Positive Sound upon Compliant Activation
- Activation is Synchronised with Conventional Push Button Unit
